

Witness Introduction of Mike Norris

Today, I have the pleasure of introducing Mr. Mike Norris, a Hoosier leader in the world of systems engineering and program management.

As the President and CEO of Warrant Technologies in Bloomington, Indiana, Mike oversees a team of more than 50 employees, serving the Department of Defense and the State of Indiana in logistics, software engineering, and naval education training.

Prior to this, he served in the U.S. Navy for 21 years, achieving the rank of Operations Specialist Master Chief.

Over the years, Mike has carved a path for himself in the tech industry, with leadership roles at Novonics Corporation and Tri Star Engineering before taking the helm at Warrant Technologies.

He holds several degrees: a Bachelor's in Business Administration with Technology Management, and two separate Master's degrees – one in Organizational Management and the other in Software Engineering.

I want to thank Mike for participating in today's roundtable and serving as an example here in Washington of Hoosier ingenuity and grit.
